

## HOLLIDAY PIGMENTS

Holliday Pigments' Position with regard to the REACH regulations

Issued :- April 2008

Holliday Pigments is committed to the implementation of REACH legislation. We shall pre-register our products during the specified period (June to November 2008 inclusive). Our products will be registered according to chemical composition rather than specific grade reference.

To the best of our knowledge, all of the raw materials supplied to us for use in the production of our products will also be registered at the appropriate time. Therefore we do not expect that it will be necessary to withdraw any of our products as a result of REACH legislation.

Our ultramarine and manganese violet products have a long history of use during which no adverse effects on health or the environment have been established, provided the products are used as directed. Our products are approved worldwide for use in sensitive applications such as food contact plastics and cosmetics. They are not classed as carcinogenic or mutagenic. They are not classified as hazardous for transport. With this overwhelming evidence of the safety of our products we do not expect any new restriction on their use to be introduced as a result of the REACH legislation.

Our products are used in a wide variety of applications. It is our intention that our registration will reflect many of these varied uses. At the appropriate time we may require your help in providing information regarding the subsequent user chain for our products.

Most of our products are pure ultramarine or manganese violet pigments and will be registered as "substances (mono-constituent)".

We would expect to update this statement once pre-registration is completed.
